

### IndustryPorte V.24 Splitter 4 port

The remote read-out of the intelligent electricity tariff devices is a simple task today using **IndustryPorte** industrial modems.

In such environment where the electricity is distributed for more customers from a single intake electricity tariff devices probably installed in the same room. In this case installation of **IndustryPorte V.24 Splitter** makes possible to read-out all the tariff devices remotely using only one modem.

The **IndustryPorte V.24 Splitter 4 port** is a serial port multiplexer device might be installed between a dedicated communication device having DCE interface and more communication devices having DTE interfaces in order to provide acces for up to 4 devices having RS-232 serial port (e.g. intelligent electricity tariff device) via only one RS-232 serial port device with DCE type connector (e.g. modem).

#### **Technical parameters**

|                     |   |
|---------------------|---|
| Connectors          | 1 pc DB-9 DTE type connector<br>4 pcs RJ-45 connectors  |
| Power supply        | From the serial port  |
| Current consumption | Max. 5 mA   |
| Layout, design      | 4 unit wide DIN-rail mountable design, industrial IP20 housing<br>70 mm * 85 mm * 60 mm (length*width*height) |
